DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4, drawn to a noise suppressing method for switching on a flat panel display driven by a time controller and a plurality of driver IC's, classified in class 345, subclass 211.
 - II. Claims 5-7, drawn to switching off a flat panel display including a charge reset, classified in class 345, subclass 98.
 - III. Claims 8-11, drawn to a method for switching on/off a flat panel display, classified in class 345, subclass 205.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it is not necessary to detect switching on or switching off in the same time. The subcombination has separate utility such as suppressing the noise when the flat panel is switched on or when the flat panel is switched off.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
